Abstract of JP2003208100

PROBLEM TO BE SOLVED: To make prints of seals, signs, passwords, etc., hardly visible through a shielding seal without using the shielding seal on a rear side even if an objective sheet is thin.

SOLUTION: The shielding seal 14 consisting of a front surface sheet 5 formed with an opaque layer 8 on the rear surface and a transparent substrate sheet 1 pasted with the front surface sheet 5 on its front surface is formed by applying line patterns 10 which make the reading of portions 3 desired to be shielded difficult by being overlapped on the statement contents of the portions 3 when viewed through together with the portions 3 from the rear surface of the objective sheet 11 on the substrate sheet 1 side of the opaque layer 8. The line parts 10 are formed by combining one or a plurality of kinds of characters, designs, patterns, and symbols.
